Portfolio

Technical Skills

Languages: Java, Python, SQL **Backend:** Spring Boot, Hibernate, REST APIs, Microservices, FastAPI
Distributed Systems: Kafka, Redis, Multithreading, Concurrency, Async Processing **Databases:** MySQL, MongoDB, PostgreSQL **Cloud & DevOps:** Docker, AWS (EC2, S3, Lambda, API Gateway), Cloud Run, Git
Core CS: DSA, OOP, System Design, LLD

Work Experience

CrashPlan

July 2025 – Present

Associate Software Engineer

Bangalore

- Designed and developed service-to-service integrations using Spring Boot and REST APIs for Dispatcher, MailService, and API Gateway modules in distributed backup systems.
- Optimized multithreaded processing using ThreadPoolExecutor and lazy-loading strategies from MongoDB, improving memory efficiency and reducing GC overhead under high-load workflows.
- Implemented retry and recovery mechanisms across distributed backup services including Gmail, Google Drive, SharePoint, and Exchange, improving reliability of asynchronous processing pipelines.
- Debugged and resolved large-scale production failures involving Kafka consumer lag, MySQL transaction failures, and MongoDB inconsistencies in distributed processing systems.
- Improved system reliability using Redis-based distributed locking and optimized backup execution workflows for high-volume enterprise customers.
- Performed root-cause analysis for stuck batch-processing and crawl pipelines using application logs, MongoDB, and MySQL debugging, reducing workflow recovery time.

TheBingeTown(Onsite)

Jan 2025 - April 2025

Software Development Engineer

Bangalore

- Enabled detailed tracking of booking updates for audit purposes while integrating gift sales into the billing workflow
- Enhanced Addons functionality to adjust based on quantity, weight, and customization options, improving accuracy
- Developed a **wrapper API** to integrate Paucket, enabling seamless coupon redemption for campaigns and daily offers
- Increased user engagement by 30% by integrating the **Paucket API** with **Google Pay** for seamless discount application

Smollan Group(Remote)

May 2024 – November 2024

Backend Engineer Intern

Remote

- Containerized backend services using **Docker**, deploying on Google VMs and Cloud Run for scalable hosting.
- Improved product performance and scalability by 20% by implementing optimized architectural patterns for handling
- Implemented a **master-slave** architecture to enhance system reliability and responsiveness during failures and scenario
- Reduced deployment time by 20% by migrating **FastAPI** Docker builds from VMs to Cloud Run, improving efficiency

Projects

AI website Generator — GitHub

November 2025 – April 2026

- Built backend using **Spring Boot MVC** (Controller, Service, Repository) for maintainable application architecture.
- Designed **microservice-oriented modules** enabling better scalability, loose coupling, & clear separation of concerns.
- Containerized services with **Docker**, integrating **PostgreSQL** and **MinIO** for reliable storage and data management.
- Implemented observability using **Grafana** and **Kibana** for real-time monitoring, logging, and debugging of services.
- Added **RBAC** for secure API access, user authorization, and fine-grained permission management across services.
- Enhancing system with **AI-assisted code generation** to automate backend workflows, development productivity.
- Tech:** Java, Spring Boot, Docker, PostgreSQL, MinIO, Grafana, Kibana

Education

ABES Engineering College, Ghaziabad

B.Tech in Information Technology

September 2020 - August 2024

7.78/10 CGPA

Competitions/Achievements

- Solved 1000+** DSA problems on **LeetCode**, along with practice on GFG, HackerRank, and Coding Studio; ranked **763/30K+** in LeetCode Biweekly Contest. **Top 50 Mentor & Project Admin** at GSSoC 2023 among 100K+ participants; contributed to open-source with **10+ merged PRs** in web development projects.
